

Special Issue on Linear Model

Call for Papers

The **linear model** is a very important statistical model, and has a very wide range of applications in modern statistics. The most typical one is the linear regression model. The linear model is of practical importance in statistics. Many phenomena such as biology, medicine, economics, management, geology, meteorology, agriculture and industry can be approximately described by linear models. The further research and development of linear model is still a very active research subject.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **linear model**. Potential topics include, but are not limited to:

- Parameter estimation in the linear model
- Linear regression model
- Linear time series model
- General linear model
- Generalized linear model
- Linear mixed model
- Applications of linear models

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Linear Model**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 29th, 2017
Publication Date	February 2018
