

Special Issue on Mathematical Analysis

Call for Papers

Mathematical analysis deal with the calculus of variations, ordinary and partial differential equations, Fourier analysis, and generating functions. Mathematical analysis has led to the possibility of studying, by its methods, forms more complicated than functions: functionals, operators, etc. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **mathematical analysis**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **mathematical analysis**. In this special issue, potential topics include, but are not limited to:

- Sets, proof techniques and systems of numbers
- Convergence for the system of real numbers
- Elements of multiplicative calculus
- Functional analysis
- Harmonic analysis
- Method of limits
- Number theory and probability theory

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue –Mathematical Analysis**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 17th, 2020
Publication Date	March 2020
