

## Special Issue on Schizophrenia

### Call for Papers

Schizophrenia is chronic and severe brain disorder that affects how a person thinks, feels, and behaves. People with schizophrenia often have false beliefs, unclear or confused thinking, hallucinations, reduced social engagement and emotional expression, and a lack of motivation. The exact cause is unclear. The possible cause may be: genes, environment, substance use or developmental factors (such as hypoxia and infection).

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Schizophrenia**. Potential topics include, but are not limited to:

- Dopamine
- Cognitive dysfunction
- Hallucination
- Antipsychotics
- Schizoaffective disorder
- Brain chemistry and structure

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Schizophrenia**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 30th, 2016
Publication Date	August 2016
