

Advances in Phenolics and Polyphenolics Research

Call for Papers

Phenol is an organic compound. It is an important industrial commodity as a precursor to many materials and useful compounds. Its major uses involve its conversion to plastics or related materials.

Polyphenols are a structural class of mainly natural, but also synthetic or semisynthetic, organic chemicals characterized by the presence of large multiples of phenol structural units. The number and characteristics of these phenol structures underlie the unique physical, chemical, and biological properties of particular members of the class

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Phenolics and Polyphenolics Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "Special Issue" under your manuscript title is supposed to be specified and the research field "*Special issue- Phenolics and Polyphenolics Research*" should be chosen during your submission.

According to the following timetable:

Manuscript Due	April 24th, 2013
Publication Date	June 2013

Guest Editor

Prof. Michael H. Bartl
University of Utah, USA
