

Advances in Malaria Research

Call for Papers

Malaria is a mosquito-borne infectious disease of humans and other animals caused by protists of the genus *Plasmodium*. The disease causes symptoms that typically include fever and headache, which in severe cases can progress to coma or death. Malaria is widespread in tropical and subtropical regions in a broad band around the equator, including much of Sub-Saharan Africa, Asia, and the Americas. Malaria can be cured but no effective vaccine currently exists although efforts to develop one are ongoing.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Malaria**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue- Malaria**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 15th, 2013
Publication Date	July 2013

Guest Editor

Prof. Reba Goodman
