

Special issue on Spinal Research

Call for Papers

Spinal is a form of regional anesthesia involving injection of a local anesthetic into the subarachnoid space, generally through a fine needle which aims to make reliable treatments for paralysis caused by a broken back or neck. Regardless of the anesthetic agent (drug) used, the desired effect is to block the transmission of afferent nerve signals from peripheral nociceptors. Current usage of this technique is waning in the developed world, with epidural analgesia or combined spinal-epidural anesthesia emerging as the techniques of choice.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Spinal Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue- Spinal Research**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 22th, 2013
Publication Date	July 2013

Guest Editor

Prof. Ridha Hambli
