Journal of Biomedical Science and Engineering (Issnonline:1937-688x)

Special issue on Mesenchymal cell Research

Call for Papers

Mesenchymal cells play a role in supporting, filling and constituting new tissues and organs in the embryonic. They are multipotent stromal cells that can differentiate into a variety of cell types, including: osteoblasts (bone cells), chondrocytes (cartilage cells), and adipocytes (fat cells). There often retained original state mesenchymal tissue in the connective tissue of humans and adult animals, and can differentiation into new tissue when needed.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Mesenchymal cell Research**.

Authors should read over the journal's <u>Authors' Guidelines</u> carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal <u>Paper Submission System</u>.

Please kindly notice that the "Special Issue" under your manuscript title is supposed to be specified and the research field "Special Issue- Mesenchymal cell Research" should be chosen during your submission.

According to the following timetable:

Manuscript Due	June 12nd, 2013
Publication Date	September 2013

Guest Editor

Prof. Kuo-Chen Chou, The Gordon Life Science Institute
