

Special Issue on Cell & Gene Therapy

Call for Papers

Cell therapy and **gene therapy** are overlapping fields of biomedical research with the goals of repairing the direct cause of genetic diseases in the DNA or cellular population, respectively. These powerful strategies are also being focused on modulating specific genes and cell subpopulations in acquired diseases in order to reestablish the normal equilibrium. In many diseases, cell and gene therapy are combined in the development of promising therapies.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **cell & gene therapy**. Potential topics include, but are not limited to:

- Stem cell therapies
- Cellular therapies
- Cancer therapies
- Immunotherapy
- Bioengineering therapeutics
- Advanced gene therapeutics
- Clinical trials and research
- Cell and gene therapy- potential applications
- Regulatory and ethical issues of therapies

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Cell & Gene Therapy**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	April 27th, 2016
Publication Date	June 2016
