

## Special Issue on Cardiac Electrophysiology

### Call for Papers

**Cardiac Electrophysiology** is the science of elucidating, diagnosing, and treating the electrical activities of the heart. The term is usually used to describe studies of such phenomena by invasive catheter recording of spontaneous activity as well as of cardiac responses to programmed electrical stimulation. Cardiac electrophysiology has developed rapidly in recent years. The expansion and accumulation of knowledge in the field of electrocardiography has led to a fundamental shift in the traditional view.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Cardiac Electrophysiology**. Potential topics include, but are not limited to:

- Heart electrical activities
- Cardiac electrophysiology
- Electrocardiograms
- Defibrillator and cardiac pacemaker
- Cardiac arrhythmia and electrophysiology review
- Radiofrequency ablation

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue–Cardiac Electrophysiology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	September 21th, 2017
Publication Date	November 2017
