

## Special Issue on Clinical EEG and Neuroscience

### Call for Papers

An electroencephalogram (EEG) is a test used to evaluate the electrical activity in the brain. Brain cells communicate with each other through electrical impulses. An EEG can be used to help detect potential problems associated with this activity.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Clinical EEG and Neuroscience**. Potential topics include, but are not limited to:

- Clinical characteristics and correlations
- Electroencephalogram and clinical predication
- Detection, stimulation and treatment
- Monitoring and diagnosis
- Electroconvulsive therapy
- EEG and information technology
- EEG and brain study
- EEG and epilepsy study
- Electrophysiological study
- Analysis of neuropsychiatric disorders
- Cognitive activity and impairment

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Clinical EEG and Neuroscience**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 11th, 2020
Publication Date	August 2020
