

Special Issue on Computer and System Science

Call for Papers

In computer science and information science, system is a hardware system, software system, or combination, which has components as its structure and observable inter-process communications as its behavior. System can also refer to a framework, aka platform, be it software or hardware, designed to allow software programs to run. A flaw in a component or system can cause the component itself or an entire system to fail to perform its required function.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Computer and System Science**. Potential topics include, but are not limited to:

- Computer information systems
- Software system and framework
- Computer networks and neural networks
- Wireless sensor networks
- Distributed systems
- System security
- Cloud computing
- Formal methods
- Complexity theory
- Computational learning theory
- Combinatorial problems
- Computer languages and systems

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Computer and System Science**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 18th, 2020
Publication Date	April 2020

Scientific Research
Open Access

Journal of Computer and Communications

ISSN Online: 2327-5227
