

Advances in lung Cancer and Treatment Research

Call for paper

Lung cancer is a disease characterized by uncontrolled cell growth in tissues of the lung. If left untreated, this growth can spread beyond the lung in a process called metastasis into nearby tissue and, eventually, into other parts of the body. Most cancers that start in lung, known as primary lung cancers, are carcinomas that derive from epithelial cells. The main types of lung cancer are small cell lung carcinoma(SCLC), also called oat cell cancer, and non-small cell lung carcinoma (NSCLC). The most common cause of lung cancer is long-term exposure to tobacco smoke. Nonsmokers account for 15% of lung cancer cases, and these cases are often attributed to a combination of genetic factors, radon gas, asbestos, and air pollution, including secondhand smoke.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **lung Cancer and Treatment Research**. Potential topics include, but are not limited to:

- Basic Biology of Lung Cancer
- Clinical Assessment of Lung Cancer
- Detection and Screening of Lung Cancer
- Epidemiology and Etiology of Lung Cancer
- Lung Cancer Surgery
- Non-Small-Cell Lung Carcinomas
- Lung Cancer Chemotherapy

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#). according to the following timetable:

Manuscript Due	July 19th, 2013
Publication Date	September 2013

Please kindly notice that the“**Special Issue**” under your manuscript title is supposed to be specified and the research field “*Special issue- lung Cancer and Treatment Research*” should be chosen during your submission.
