

## Special issue on Kidney Cancer Research

### Call for Papers

**Kidney cancer** is a type of cancer that starts in the cells in the kidney. The two most common types of kidney cancer are renal cell carcinoma (RCC) and urothelial cell carcinoma (UCC) of the renal pelvis. These names reflect the type of cell from which the cancer developed. The different types of kidney cancer (such as RCC and UCC) develop in different ways, meaning that the diseases have different outlooks, and need to be staged and treated in different ways. RCC is responsible for approximately 80% of primary renal cancers, and UCC accounts the majority of the remainder (20%).

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Kidney cancer**.

- Squamous cell carcinoma
- Juxtaglomerular cell tumor
- Angiomyolipoma
- Renal oncocytoma
- Bellini duct carcinoma
- Clear-cell sarcoma of the kidney
- Mesoblastic nephroma
- Wilms' tumor, usually is reported in children under the age of 5.
- Mixed epithelial stromal tumor

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special issue- Kidney cancer Research**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	August 28th, 2013
Publication Date	October 2013
