

Special Issue on Lymphoma

Call for Papers

Lymphoma refers to a group of blood cell tumors that develop in the lymphatic system, which is one of the most common forms of hematological malignancy or "blood cancer" in the world. There are two broad types of lymphoma: Hodgkin lymphomas (HL) and non-Hodgkin lymphomas (NHL). The main symptom is usually enlargement of lymph nodes that does not go away. Other symptoms include fever, drenching sweats, weight loss, itching, feeling tired, etc.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Lymphoma**. Potential topics include, but are not limited to:

- Lymphocytic lymphoma
- Burkitt's lymphoma
- Follicular lymphoma
- Hodgkin lymphomas
- Non-Hodgkin lymphomas
- Lymph node biopsy
- Lymphadenopathy
- Precursor lymphoid neoplasms

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - Lymphoma**" should be selected during your submission.

Special Issue Timetable:

Submission Deadline	March 2nd, 2016
Publication Date	May 2016
