

Special Issue on
Environment Contamination and Toxicology

Call for Papers

Environmental toxicology is a branch of environmental science and toxicology, it refers to uses the toxicology methods to study the effects of the harmful factors in the environmental on population and ecosystem, from the point of view of chemistry, medicine and biology. Its main task is to study the possible biological effect that environmental pollutants might have on organism, affect the detection index of mechanism and early damage, to provide scientific basis for the making of the environmental sanitation standard and the implementation of environmental protection work.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **environment contamination and toxicology**. Potential topics include, but are not limited to:

- Sources of environmental toxicity
- Environmental pollutants assessment
- Chemical substances combined effect
- Degradation and converted products
- Teratogenesis mechanism and solution
- Immune function
- Radiation and supersonic toxic effect
- Ecological risk assessment
- Physiology toxin and pathogenic microorganism

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Environment Contamination and Toxicology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 5th, 2014
Publication Date	August 2014

Scientific Research
Open Access

Journal of Environmental Protection

ISSN Online: 2152-2219
