Special Issue on Pollutants Source Control and Processing

Call for Papers

Pollutants Control means the control of emissions and effluents into air, water or soil. Without pollution control, the waste products from consumption, heating, agriculture, mining, manufacturing, transportation and other human activities, whether they accumulate or disperse, will do harm to our the environment. In the hierarchy of controls, pollution prevention and waste minimization are more desirable than pollution control. In the field of land development, low impact development is a similar technique for the prevention of urban runoff. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **pollutants source control and processing**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **pollutants source control and processing**. In this special issue, potential topics include, but are not limited to:

- Paper-making industry control
- Carbon dioxide emissions
- Sulfide gas emissions
- Use of nondegradable pesticide
- Automobile exhaust
- Waste batteries

Authors should read over the journal's <u>Authors' Guidelines</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "Special Issue" under your manuscript title is supposed to be specified and the research field "Special Issue - *Pollutants Source Control and Processing*" should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 18th, 2014
Publication Date	August 2014

Guest Editor:

Prof. Shuguang Deng
