

Special Issue on Environment Modeling

Call for Papers

Environmental modeling is the process of using computer algorithms to predict the distribution of species in geographic space on the basis of a mathematical representation of their known distribution in environmental space. It builds bridges between the scientific community's understanding of key environmental issues and the decision makers' need to influence relevant policies. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of environmental modelling.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **environment modeling**. Potential topics include, but are not limited to:

- Environmental modeling technology
- Mathematical model of water environment
- Ecological modeling
- Application of GIS in the environment research
- Land cover change analysis and prediction
- Habitat impact analysis
- Application of environment model

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Environment Modeling**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 28th, 2019
Publication Date	August 2019
