

## Special Issue on Dark Matter and Dark Energy

### Call for Papers

Dark matter is a hypothetical kind of matter that cannot be seen with telescopes but would account for most of the matter in the universe. The existence and properties of dark matter are inferred from its gravitational effects on visible matter, on radiation, and on the large-scale structure of the universe. Dark matter has not been detected directly, making it one of the greatest mysteries in modern astrophysics. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of research on dark matter and dark energy.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **dark matter and dark energy**. In this special issue, potential topics include, but are not limited to:

- The origin of dark matter and dark energy
- The formation of dark matter and dark energy
- Dark energy model
- The composition of dark matter and dark energy
- The future of the universe
- Big tear theory

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Dark Matter and Dark Energy**” should be chosen during your submission.

Special Issue timetable:

Submission Deadline	March 29th, 2016
Publication Date	May 2016
