

Special Issue on String Theory

Call for Papers

String theory is a broad and varied subject that attempts to address a number of deep questions of fundamental physics. String theory has been applied to a variety of problems in black hole physics, early universe cosmology, nuclear physics, and condensed matter physics, and it has stimulated a number of major developments in pure mathematics. In recent years many exciting developments have taken place, radically improving our understanding of what the theory is. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of string theory.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **string theory**. In this special issue, potential topics include, but are not limited to:

- Fundamentals of string theory
- M-theory
- Black holes
- Phenomenology
- Connections to mathematics
- Superstring theory

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – String Theory**” should be chosen during your submission.

Special Issue timetable:

Submission Deadline	December 8th, 2016
Publication Date	February 2017
