

Special Issue on
Research on Dark Matter and Dark Energy

Call for Papers

Dark matter is a hypothetical kind of matter that cannot be seen with telescopes but would account for most of the matter in the universe. More is unknown than is known. We know how much dark energy there is because we know how it affects the universe's expansion. Other than that, it is a complete mystery. But it is an important mystery. It turns out that roughly 68% of the universe is dark energy. Dark matter makes up about 27%. The rest - everything on Earth, everything ever observed with all of our instruments, all normal matter - adds up to less than 5% of the universe. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **research on dark matter and dark energy**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **dark matter and dark energy**. In this special issue, potential topics include, but are not limited to:

- The origin of dark matter and dark energy
- The formation of dark matter and dark energy
- Dark energy model
- The composition of dark matter and dark energy
- The future of the universe
- Big tear theory

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Research on Dark Matter and Dark Energy**” should be chosen during your submission.

Special Issue timetable:

| | |
|---------------------|---------------------|
| Submission Deadline | November 22nd, 2017 |
| Publication Date | January 2018 |

Guest Editor:

Scientific Research
Open Access

Journal of Modern Physics

ISSN Online: 2153-120X
