

## Special Issue on Plasma Physics

### Call for Papers

As the fourth state of matter, plasmas are widely distributed in various stars, interplanetary space, high earth ionosphere, laboratory, many commercial applications, and even daily life. There are three kinds of research methods in plasma physics, such as single particle orbit theory, magnetohydrodynamics and dynamics theory. From low temperature to high temperature plasma, from space plasma to fusion plasma, from laser plasma to Z pinch plasma, plasma physics contains a very wide range of research topics, thus resulting in a wide range of applications.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **plasma physics**. Potential topics include, but are not limited to:

- Space plasma
- Fusion plasma
- Laser plasma
- Nonlinear plasma
- low temperature plasma
- High temperature plasma
- Plasma calculation

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Plasma Physics**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 29th, 2018
Publication Date	April 2018
