Special Issue on Field Theory

Call for Papers

Field, in physics, a region in which each point is affected by a force. Objects fall to the ground because they are affected by the force of earth's gravitational field (see gravitation). A paper clip, placed in the magnetic field surrounding a magnet, is pulled toward the magnet, and two like magnetic poles repel each other when one is placed in the other's magnetic field. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Field Theory**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Field Theory**. In this special issue, potential topics include, but are not limited to:

- Quantum field theory
- Classical field theory
- Quantum computation
- Gravitational field
- The electromagnetic field
- Continuous random fields
- Applications of field theory

Authors should read over the journal's Authors' Guidelines carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Field Theory***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	February 25th, 2024
Publication Date	April 2024
