

Special Issue on Drinking Water and Human Health

Call for Papers

Water makes up more than two thirds of human body weight, and without water, we would die in a few days. Your body is estimated to be about 60 to 70 percent water. Blood is mostly water, and your muscles, lungs, and brain all contain a lot of water. The health and livelihood of human depends on the availability of a safe drinking water supply. In some portions of the nation drinking water is a scarce resource, while in other areas abundant water supplies are available. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of drinking water and human health.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **drinking water and human health**. In this special issue, potential topics include, but are not limited to:

- Drinking water and human health effects
- Drinking water contaminants
- Drinking Water Standards
- Drinking water purification technology
- Drinking water quality monitoring
- Importance of drinking water

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly note that the “**Special Issue**” under your manuscript title should be specified and the research field “**Special Issue - Drinking Water and Human Health**” should be selected during your submission.

Special Issue timetable:
