

Special Issue on Water Quality Monitoring and Assessment

Call for Papers

Water quality monitoring and assessment aims to obtain qualitative information on the physical, chemical, and biological characteristics of a water body. It can be measured by collecting water samples for laboratory analysis or by using probes which can record data at a single point in time, or logged at regular intervals over an extended period.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Water Quality Monitoring and Assessment**. Potential topics include, but are not limited to:

- Physical and chemical analyses
- Biological monitoring
- Surface and groundwater monitoring
- Sampling and analytical methods
- Field work and sampling
- Hydrological measurements
- Sediment measurements
- Environmental water quality

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Water Quality Monitoring and Assessment**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	April 28th, 2020
Publication Date	June 2020
