

Special Issue on Unsaturated Polyester Resin and Its Application

Call for Papers

Unsaturated polyester resins (UPR) are thermosetting resins produced by the reaction of polyesterification between dicarboxylic acids (saturated and unsaturated) and glycols. UPR has many advantages, such as excellent mechanical capability, strong electricity performance, chemical corrosion resistance and simple processing step. It is widely used in agriculture, industry, transportation, construction and so on.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **unsaturated polyester resin and its application**. Potential topics include, but are not limited to:

- Modification of unsaturated polyester resin
- Properties of unsaturated polyester resin
- Low shrinkage UPR
- Anticorrosion UPR
- High flexible UPR
- Transparent UPR
- Development and applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Unsaturated Polyester Resin and Its Application**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	February 9th, 2017
Publication Date	April 2017
