

Special Issue on Electrolyte and Electrode Materials

Call for Papers

Electrodes and electrode materials are metals and other substances used as the makeup of electrical components. They are used to make contact with a nonmetallic part of a circuit, and are the materials in a system through which an electrical current is transferred. There are many different types of electrodes which vary by charge and by application. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **electrolyte and electrode materials**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **electrolyte and electrode materials**. Potential topics include, but are not limited to:

- Electrode materials
- Material properties
- Lithium ion battery electrode materials
- Capacitor electrode material
- Modification and characterization
- The applications of electrode materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - *Electrolyte and Electrode Materials***” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 26th, 2017
Publication Date	December 2017
