

## Special Issue on Electrochemical Materials

### Call for Papers

Electrochemical materials and phenomena play an important role in the present-day technology. Batteries, fuel cells, supercapacitors, electrochromic devices, gas separation membranes, and sensors are some examples applications of electrochemical materials. The success in electrochemical technology is largely due to the continued design and development of newer materials that meet the needs of the modern society. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **electrochemical materials**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **electrochemical materials**. In this special issue, potential topics include, but are not limited to:

- Chemical and electrochemical processing of materials
- Chemical and electrochemical behavior of materials
- Electrode Materials
- Fuel cells and supercapacitors
- Materials for electrochemical information storage
- Applications of electrochemical materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - *Electrochemical Materials***” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 29th 2018
Publication Date	May 2018
