

Special Issue on Material Corrosion and Protection

Call for Papers

Corrosion is the chemical or electrochemical reaction between a material and its environments that produces a deterioration of the material and its properties. To choose an effective corrosion protection it is important to know the corrosion processes and factors affecting the speed and progression of corrosion. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Material Corrosion and Protection**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Material Corrosion and Protection**. In this special issue, potential topics include, but are not limited to:

- Corrosion prevention techniques
- Microbial corrosion
- Barrier protection
- Electrochemical corrosion
- Metal selection and surface conditions
- Corrosion in passivated materials
- Cathodic protection
- High-temperature corrosion
- Permanent corrosion protection

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Material Corrosion and Protection**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	September 18th, 2019
Publication Date	November 2019
