

Special Issue on Research on Luminescent Materials

Call for Papers

Luminescent materials are kind of functional materials that can convert various forms of energy absorbed from external sources into non equilibrium optical radiation. Luminescent modes of luminescent materials are various, and the main types are photoluminescence, cathodoluminescence, electroluminescence, thermoluminescence, radiation and so on. Luminescent materials are widely used in communication, satellite, radar, optical computer, biological molecular probes and other high-tech fields.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **research on luminescent materials**. Potential topics include, but are not limited to:

- Fluorescent materials
- Photoluminescent materials
- Electroluminescent materials
- Polymer luminescent materials
- Semiconductor luminescent materials
- Rare earth luminescent materials
- Luminescence of metal complexes
- Synthesis and properties of luminescent materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Research on Luminescent Materials**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 31st, 2018
Publication Date	March 2018
