

Special Issue on Weather Forecasting

Call for Papers

This special issue mainly focuses on the predication of the weather or climate. **Weather forecasting** is the application of science technology to predict the state of the atmosphere for a given location. Weather forecasts are made by collecting quantitative data about the current state of the atmosphere on a given place and using scientific understanding of atmospheric processes to project how the atmosphere will evolve on that place. There is a variety of end use to weather forecasts. Weather warnings are important forecasts because they are used to protect life and property.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Weather Forecasting**. Potential topics include, but are not limited to:

- Weather forecasting
- Climate prediction
- Weather warning
- Trend estimation
- Tropical cyclone forecasting
- Weather control

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Weather Forecasting**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	February 11th, 2014
Publication Date	April 2014

Guest Editor:

Prof. Mark Lee Morrissey

University of Oklahoma, USA
