

Special Issue on Research on Antioxidants

Call for Papers

Antioxidants are man-made or natural substances that may prevent or delay some types of cell damage. Well known antioxidants include enzymes and other substances, such as vitamin C, vitamin E, and beta carotene, which are capable of counteracting the damaging effects of oxidation. Antioxidants have many industrial applications, such as add to food and cosmetics products, and prevent the degradation of rubber and gasoline.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **research on antioxidants**. Potential topics include, but are not limited to:

- Antioxidants and health effect
- Antioxidant enzymes and vitamins
- Superoxide dismutase
- Oxidative challenge in biology
- Pro-oxidant activities
- Oxidative stress in disease
- Applications of antioxidants

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Research on Antioxidants**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	April 28th, 2016
Publication Date	June 2016
