

Special issue on Entomology Research

Call for Papers

Entomology is the scientific study of insects, including their taxonomy, morphology, physiology, and ecology. It is a major branch of animal zoology. Like several of the other fields that are categorized within zoology, entomology is a taxon-based category; any form of scientific study in which there is a focus on insect related inquiries is, by definition, entomology. Entomology therefore includes a cross-section of topics as diverse as molecular genetics, behavior, biomechanics, biochemistry, systematic, physiology, developmental biology, ecology, morphology, paleontology, mathematics, anthropology, robotics, agriculture, nutrition, forensic science, and more. Applied aspects of entomology, such as the harmful and beneficial impact of insects on humans, are also studied.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Entomology Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue- Entomology Research**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	April 24th, 2013
Publication Date	June 2013

Guest Editor:

Prof. Klaus-Peter Brüssow Leibniz
Institute for Far Animal Biology (FBN) Dummerstorf, Germany
