

Special Issue on Research on Wetland Ecology

Call for Papers

A wetland is a land area that is saturated with water, either permanently or seasonally, such that it takes on the characteristics of a distinct ecosystem. Primarily, the factor that distinguishes wetlands from other land forms or water bodies is the characteristic vegetation that is adapted to its unique soil conditions: Wetlands consist primarily of hydric soil, which supports aquatic plants.

Wetlands play a number of roles in the environment, principally water purification, flood control, and shoreline stability. Wetlands are also considered the most biologically diverse of all ecosystems, serving as home to a wide range of plant and animal life. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **research on wetland ecology**.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **research on wetland ecology**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Research on Wetland Ecology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 23rd, 2014
Publication Date	March 2014

Guest Editor:

Dr. Victor R. Savage

Geography, National University of Singapore, Singapore
