

## Special Issue on Introduced Species

### Call for Papers

An **introduced, alien, exotic, non-indigenous, or non-native species**, or simply an introduction, is a species living outside its native distributional range, which has arrived there by human activity, either deliberate or accidental. Non-native species can have various effects on the local ecosystem. Not all non-native species are considered invasive. The effects of **introduced species** on natural environments have gained much scrutiny from scientists, governments, farmers and others.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **introduced species**. Potential topics include, but are not limited to:

- Changes in species distribution
- Interactive with native species
- Invasive species traits
- Impact on biodiversity and ecosystem
- Impact on environment
- Impact on economic and human society

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Introduced Species**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 12th, 2015
Publication Date	April 2015
