

Special Issue on Research on Aquatic Ecosystems

Call for Papers

Most of the water on our planet is in the oceans that cover 71 percent of Earth's surface. Less than 1 percent of all the water is considered freshwater, and most of that is frozen in the polar ice caps. The study of freshwater aquatic ecosystems, limnology, has often been separated from the study of marine systems, oceanography. Although freshwater and marine ecosystems are extremely diverse in structure, all of the plants and animals must live in or on water. The physical constraints and opportunities for life in water, and how all of these living organisms interact with each other in a liquid medium, give a unifying theme to aquatic studies. As one of the most important and timely research fields of human life, aquatic ecosystems are of great attraction to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **research on aquatic ecosystems**. Potential topics include, but are not limited to:

- Aquatic plants
- Aquatic organisms
- Diversity of habitats
- Water, land, people, and wildlife
- Freshwater aquatic ecosystems
- Aquatic ecosystem health
- Water and ecosystem initiatives

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Research on Aquatic Ecosystems**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 16th, 2017
Publication Date	May 2017

Guest Editor:

Scientific Research
Open Access

Open Journal of Ecology

ISSN Online: 2162-1993
