

Special Issue on Environmental Chemistry and Ecotoxicology

Call for Papers

Pesticides and other contaminants that get into the natural environment can affect wild plants and animals. The science of studying these effects is called ecotoxicology. Ecotoxicology is a mix of ecology, toxicology, physiology, analytical chemistry, molecular biology, and mathematics. Ecotoxicology looks at the impacts of contaminants including pesticides on individuals, populations, natural communities, and ecosystems. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **environmental chemistry and ecotoxicology**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **environmental chemistry and ecotoxicology**. In this special issue, potential topics include, but are not limited to:

- Pollutants of environmental behaviors
- The toxic effects of chemical pollutants
- Environmental toxicology
- The toxic effect of inorganic polluting
- The toxic effect of radiation and ultrasonic
- The ecological risk assessment

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Environmental Chemistry and Ecotoxicology**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 3rd, 2018
Publication Date	September 2018
