

Special Issue on Environmental Geology

Call for Papers

Environmental geology is an applied science concerned with the interactions between humans and their geologic environment. This issue will explore issues relating to these interactions, such as natural hazards, natural resources, climate change, human population; pollution and environmental policies. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of Environmental Geology.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Environmental Geology**. Potential topics include, but are not limited to:

- Anthropogenic activities
- Climate change and geology
- Coastal processes and management
- Environmental geochemistry
- Environmental monitoring and remediation
- Geogenic events
- Geologic hazards and risk assessment
- Geological engineering
- Geotechnical stability
- Hydrological and hydrogeological conditions
- Industrial ecology
- Land use planning and geology
- Landform analysis
- Natural resource management
- Nonrenewable resources
- Soil erosion
- Topography

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Environmental Geology**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	May 10th, 2024
Publication Date	July 2024
