

Special issue on Fertility and Sterility

Call for Papers

Fertility is the natural human capacity to produce offspring. Fertility differs from fecundity, which is defined as the potential for reproduction (influenced by gamete production, fertilisation and carrying a pregnancy to term). A lack of fecundity would be called sterility.

Human fertility depends on factors of nutrition, sexual behavior, culture, instinct, endocrinology, timing, economics, way of life, and emotions. The cause of sterility is complicated, some can be treated with medical intervention.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Fertility and Sterility**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "*Special Issue- Fertility and Sterility*" should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 15th, 2013
Publication Date	July 2013

Guest Editor

Prof. Paul J. Hoskins

University of British Columbia, Canada
