

## Special Issue on Laser Technology Research

### Call for Papers

The term "**laser**" originates from the abbreviation of "light amplification by stimulated emission of radiation". The development of laser has not only led to the emergence of optical science and optical technology, but also led to the emergence of a whole new industry. Since early days of laser development, a variety of special laser types have been studied. To design specialized laser types, optimizing different performance targets (such as minimum output pulse duration, maximum average output power, minimum cost and so on) have been the hot issues these days.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **laser technology research**. Potential topics include, but are not limited to:

- Principle and classification of laser
- Study on the characteristics of laser
- Hazard and precaution of laser
- Laser devices
- Practical application of laser
- Research progress of laser

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue – Laser Technology Research**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	April 17th, 2018
Publication Date	June 2018
