

Special Issue on Drug Resistance

Call for Papers

Drug Resistance is the reduction in effectiveness of a drug. When an organism is resistant to more than one drug, it is said to be multidrug-resistant. According to WHO report “Antimicrobial resistance: global report on surveillance 2014”, a post-antibiotic era – in which common infections and minor injuries can kill – far from being an apocalyptic fantasy, is instead a very real possibility for the 21st Century.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **drug resistance**. Potential topics include, but are not limited to:

- Antimicrobial resistance
- Antineoplastic resistance
- Multidrug-resistant
- Reduced Drug accumulation
- Mechanisms of Drug resistance
- Solution of Drug resistance

Authors should read over the journal’s [Authors’ Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Drug Resistance**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 18th, 2014
Publication Date	February 2015
