

Special Issue on Conservation of Endangered Animals and Protection of Their Habitats

Call for Papers

Animal populations are disappearing at an alarming rate. But even in the face of threats like poaching, habitat loss and overuse of natural resources, WWF is creating a better future for wildlife every day. Protecting these species also contributes to a thriving, healthy planet for people's health and well-being—from forests that slow climate change and filter water to oceans that provide more than one-sixth of the world's food.

We protect wildlife because they inspire us. But we also focus our efforts on those species—like tigers, rhinos, whales and marine turtles—whose protection influences and supports the survival of other species or offers the opportunity to protect whole landscapes or marine areas.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring *conservation of endangered animals and protection of their habitats*.

Authors should read over the journal's [Author Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**conservation of endangered animals and protection of their habitats**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	March 27th, 2013
Publication Date	May, 2013
