

Special Issue on Bariatric Surgery

Call for Papers

Bariatric Surgery includes a variety of procedures performed on people who have obesity. Reducing the size of the stomach is the common way to achieve the goal. Long-term studies show the procedures cause significant long-term loss of weight, recovery from diabetes, improvement in cardiovascular risk factors and a reduction in mortality. However, the disadvantages or even adverse effects have been proven by many studies. As larger numbers of people suffer from obesity and diabetes, further research on safe and effective management is of great importance and value.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **bariatric surgery**. Potential topics include, but are not limited to:

- Bariatric surgery
- Gastric bypass surgery
- Major treatment
- Liposuction and lipolysis
- Complications
- Adverse effects
- Obesity and diabetes

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Bariatric Surgery**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 25th, 2015
Publication Date	August 2015
