

A system monitor is a hardware or software component used to monitor system resources and performance in a computer system.

Among the management issues regarding use of system monitoring tools are resource usage and privacy.

In the present book, fifteen typical literatures about Monitoring System published on international authoritative journals were selected to introduce the worldwide newest progress, which contains reviews or original researches on Monitoring System. We hope this book can demonstrate advances in Monitoring System as well as give references to the researchers, students and other related people.¹
