Biology comes from the Greek word for life, bios, and the Greek word for thought or reasoning, logos. It denotes the science that studies life, the properties and processes that sustain life, the evolutionary history of life, and particular living organisms. It is a science of enormous diversity, breadth, and heterogeneity unified only by the conceptual framework provided by the theory of evolution. "Nothing in biology makes sense except in the light of evolution"—a quote now replicated in so many university-level textbooks that it is almost a dictum in modern biology.

Biology is composed of many fields, including microbiology, the study of microscopic organisms such as viruses and bacteria; cytology, the study of cells; embryology, the study of development; genetics, the study of heredity; biochemistry, the study of the chemical structures in living things; morphology, the study of the anatomy of plants and animals; taxonomy, the identification, naming, and classification of organisms; and physiology, the study of how organic systems function and respond to stimulation. Biology often interacts with other sciences, such as psychology. The biological works of Aristotle include his observations and classification of his large collections of animals. For example, animal behaviorists would need to understand the biological nature of the animal they are studying in order to evaluate a particular animal's behavior.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Special Biology Research.

Authors should read over the journal’s Authors’ Guidelines carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue-Special Biology Research” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Manuscript Due</th>
<th>May 29th, 2013</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>July 2013</td>
</tr>
</tbody>
</table>
