**Special Issue on Productivity Analysis**

**Call for Papers**

**Productivity** describes various measures of the efficiency of production. A productivity measure is expressed as the ratio of output to inputs used in a production process. Productivity is a crucial factor in production performance of firms and nations. Increasing national productivity can raise living standards because more real income improves people's ability to purchase goods and services, enjoy leisure, improve housing and education and contribute to social and environmental programs. Productivity growth also helps businesses to be more profitable.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **productivity analysis**. Potential topics include, but are not limited to:

- Business productivity and management
- Performance of firms
- Industrial productivity
- Labour productivity
- Cost and productivity
- Gross Domestic Product
- Productivity and output growth
- Production efficiency, growth and innovation

Authors should read over the journal’s [For Authors] carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System].

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Productivity Analysis**” should be chosen during your submission.

According to the following timetable:
