Special Issue on
Parallel Computing and Combinatorial Optimization

Call for Papers

Parallel computing is receiving a rapidly increasing amount of attention. In theory, a collection of processors that operate in parallel can achieve substantial speedups. Parallel computing and combinatorial optimization aims at providing a forum in the field of parallel computing for difficult combinatorial optimization problems, like cutting stock problems, large scale linear programming problems, nonlinear optimization problems and global optimization problems. It is widely application in cloud computing, planning, logistics, manufacturing, finance, telecommunications, and computational biology.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring parallel computing and combinatorial optimization. Potential topics include, but are not limited to:

- Integer programming, linear programming, nonlinear programming
- Global optimization, polynomial optimization
- Exact methods and heuristics
- Parallel algorithms for combinatorial optimization
- Parallel metaheuristics
- Distributed optimization algorithms
- Hybrid computing
- Peer to peer computing and optimization problems
- Applications

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Parallel Computing and Combinatorial Optimization” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>July 29th, 2016</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>September 2016</td>
</tr>
</tbody>
</table>
Guest Editors:
Prof. Didier El Baz
LAAS-CNRS, Toulouse, France
Prof. Mhand Hifi
EPROAD, UPJV, France
Prof. Bora Uçar
CNRS and ENS Lyon, France
