Special Issue on Research on Agronomy

Call for Papers

Agronomy research is focused on sustainable management of crops and cropping systems. We focus on crops important to Virginia—including corn, small grains, soybeans, forages and pasture crops, tobacco, cotton, as well as turfgrass for golf courses, sports fields, and sod production. We also have major projects in international cropping systems research to improve food security, especially in the developing world. The expertise of our faculty in the agronomic sciences is focused on the discovery and implementation of sustainable, profitable, and environmentally sound crop production practices. Our department has three signature research areas within Agronomy. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of research on agronomy.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore research on agronomy. In this special issue, potential topics include, but are not limited to:

- Sustainable management of crops
- Crop rotation, irrigation and drainage
- Soil classification and soil fertility
- Insect and pest control
- Plant breeding and physiology
- Environmental impact of agriculture

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Research on Agronomy” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>January 16th, 2019</th>
</tr>
