Special Issue on Irrigation and Drainage Engineering

Call for Papers

Irrigation is the artificial application of water to land for the purpose of agricultural production. Effective irrigation will influence the entire growth process from seedbed preparation, germination, root growth, nutrient utilisation, plant growth and regrowth, yield and quality. The key to maximising irrigation efforts is uniformity. The producer has a lot of control over how much water to supply and when to apply it but the irrigation system determines uniformity. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Irrigation and Drainage Engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Irrigation and Drainage Engineering**. In this special issue, potential topics include, but are not limited to:

- The value of irrigation
- Irrigation system description
- Source of irrigation water
- Subsurface drip irrigation
- Irrigation water management
- Measurement of irrigation water use

Authors should read over the journal’s [For Authors] carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System].

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Irrigation and Drainage Engineering**” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>March 20th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>May 2019</td>
</tr>
</tbody>
</table>
