Special Issue on Research on Horticulture

Call for Papers

Horticulture is the science of cultivating plants. Horticultural professionals conduct research and prepare soil for the successful propagation of plants. They apply their knowledge of plant science to a variety of industries, such as crop management, gardening, production, marketing, research and landscape design. For example, horticulturalists may care for plants in nurseries and greenhouses or work as landscape designers, who plan and maintain gardens, golf courses and other plant sites. Horticulturalists who work in research study plant growth and develop new methods of harvesting. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of Research on Horticulture.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore Research on Horticulture. In this special issue, potential topics include, but are not limited to:

- Horticulture production and management
- Biology of horticultural crops
- Environmental stewardship
- Fruit production – tree fruits and berries
- Urban horticulture
- Weed science

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Research on Horticulture” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>June 12th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>August 2019</td>
</tr>
