Special Issue on Traffic Engineering

Call for Papers

Traffic engineering is a branch of civil engineering that uses engineering techniques to achieve the safe and efficient movement of people and goods. It focuses mainly on research and construction of the immobile infrastructure necessary for this movement, such as roads, railway tracks, bridges, traffic signs and traffic lights. The goal of this special issue is to provide a platform for scientists and academics all over the world to promote, share and discuss various new issues and developments in traffic engineering.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore traffic engineering. In this special issue, potential topics include, but are not limited to:

- Intelligent transportation theory and application of information technology
- Road traffic operation management and control
- Rail transportation operation and management
- Transportation infrastructure security risk management
- Urban and regional transportation system planning
- Management of urban and regional transportation systems
- Urban traffic control and intelligent traffic system

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Traffic Engineering” should be selected during your submission.
